

PLANTEC

Corporate Profile

2025 01 English

We are an organization with the expertise in the fields of architecture, consulting and creative design.

Mission

We ordinarily achieve the extraordinary.

Together with clients, communities and partners,
we create groundbreaking spaces and experiences for a better life and society.

PLANTEC

Plantec's strength comes from the wide variety of expertise covering building design, facility management, business consulting, advisory services and more. Plantec provides not only "design" but also "solutions" that are customized to fit each client's needs.

Net One Systems innovation center netone valley

A workplace where people, information, and technology converge

| Office

Location: Shinagawa-ku, Tokyo
 Completion: April 2023
 Floors: 7 floors above ground
 1 tower house
 Structure: S
 Site area : 5,292m²
 Building area: 4,288m²
 Total floor area: 25,434m²
 Photo: Blue Hours

5F VALLEY

Integrated logistics center and office space utilizing warehouse space

A new warehouse was planned in the logistics hub of Katsushima, Shinagawa City, initiating a project to integrate office and logistics functions seamlessly. "This innovation center maximizes the warehouse space with the 1st to 4th floors dedicated to logistics and testing, while the 5th to 7th floors as offices with a vast space, 100m east to west, 40m north to south, and a 5.5m ceiling height. The "valley" connecting the 5th and 6th floors at the center of the office induces communication and innovation by expanding the flow of people through the atrium. In contrast to simple warehouse space, the 5th floor "PARK" and other office areas feature a large amount of greenery, lighting that changes with time, and environmental music to create an environment that inspires new ideas." The 7th floor holds the VIEW LOUNGE for internal and external meetings and exchanges, a multi-purpose area for various events, and a meditation space, realizing an environment for creating new value.

- ▶ Reducing rent and streamlining functions
- ▶ Fostering internal exchanges and driving open innovation both within and beyond the company

Comprehensive support for planning, interior design, CM, FF&E, and exhibition design

- ▶ Prompt communication with management and high-quality workflow

5F PARK

7F VIEW LOUNGE

Adopting state-of-the-art digital design

At the reception entrance, we created signage featuring the seasonal scenes to welcome visitors, along with a showcase to display the latest technology. In addition, a video highlighting the Innovation Center "netone" was produced.

5F VALLEY

- ▶ Strengthening corporate branding

PJ2023

Environmentally Conscious Smart Building with Cutting-Edge Technology

Takamatsu Construction Group Tokyo Head Office Building

A new construction project for the Takamatsu Construction Group Tokyo Head Office Building, Office led by Takamatsu Construction, Asunaro Aoki Construction, and others

Utilizing the integral design system to maximize the floor area ratio

A pedestrian walkway and open space were developed around the site's perimeter, featuring an 8m-high pilotis space facing the intersection.

- ▶ **Creating a spacious area around the intersection, with consideration for the pedestrians' safety**

Adopting Japan's first equipment-integrated double-skin curtain wall

- The building's smooth, streamlined exterior design is achieved with frameless, high-transparency glass, which enhances the sense of transparency.
- High thermal and sound insulation performance (equivalent to T-4 grade) creates a comfortable working environment.
- The building's smooth, streamlined exterior design is achieved with frameless, high-transparency glass, which enhances the sense of transparency. Situated at Daiichi Keihin and Route 130 intersection, the building is visible from both JR and Monorail lines, fulfilling the client's vision for an aesthetically pleasing and transparent office.

- ▶ **Realization of an office that integrates functionality and aesthetics**

A compact facility-integrated system with a thickness of 210mm, incorporating the blinds themselves and motors

A structural plan utilizing the existing underground frame

A vibration-control structure for a high-rise building can be achieved by utilizing the existing basement frame without pile work. This approach also contributes to cost reduction and minimizes vibration, noise, and waste generated by demolition, thereby reducing environmental impact. In addition, the balanced arrangement of vibration control dampers around the core creates a column-free office space.

- ▶ **Cost- and environmentally-conscious seismic reinforcement**

Large signage visible from the street to promote corporate messaging

Flexible, column-free office space

Reception room overlooking Tokyo Tower and Tokyo Bay

Introduction of advanced technology

Solar panels installed on the rooftop display the daily electricity generation on a monitor. Additionally, placing solar panels on outdoor units improves air conditioning efficiency. An automatic lighting control system was installed in conjunction with motion sensors and a security system based on time schedules and usage scenarios. A control system that interlocks elevators and security gates, directing users to designated elevators.

- ▶ **Creation of a smart building equipped with solar panels, lighting, elevator control systems, and more**

PJ2023

Stay-and-go Commercial Complex in the Ginza Corridor District

GRANBELL SQUARE

Aiming to become Ginza's premier "stay-and-go excitement creation center," this new commercial complex

| Commercial

Location: Chuo-ku, Tokyo
Completion: December 2022
Floors: 10 aboveground,
3 belowground
Structure: S, SRC
Site area: 1,173.78m²
Building area: 1,027.44m²
Total floor area: 10,789.52m²
Photo: Spiral

Facade (west side)

The flagship of GRANBELL HOTEL

- The front lobby is on the 5th floor with a terrace surrounded by greenery and an open lobby space with lighting on both sides.
- The interior design incorporates Showa Modern elements and features luxurious materials, such as lighting and faucet fixtures that blend classic and modern styles.

Front lobby

Guest rooms with terrace

- ▶ Providing a high-quality, comfortable hotel space befitting Ginza

Structural planning to meet the volume requirements for each intended use

10th floor (rooftop restaurant)

An external terrace is provided to maximize seating capacity. It partially protrudes from the hotel floor, impacting the exterior design and contributing to its presence as a landmark.

5th to 9th floors (Hotel)

Unlike the 1st to 4th floors, which were planned to maximize the floor area, the walls on the upper floors are set back from the lower floors to arrange guest rooms efficiently. The columns are flattened to reduce their presence and centrally placed between guest rooms to achieve the same horizontal continuous windows as the lower floors, creating a unified facade for the entire building.

B3F to 4F (spa, nightclub, restaurants)

A wide-span structure was adopted to create an 18m x 12m atrium and a maximum 27m x 17m column-free space on the B2F, where the nightclub is located. The 1st through 4th floors feature 19m-wide spans that allow flexible retail layouts. Part of the existing basement frame was reused to reduce costs and shorten the construction period.

- ▶ Increased profitability by maximizing floor space
- ▶ Reduction of cost and construction time by utilizing the existing basement frame

10F Rooftop Bar
Restaurant
5-9F Hotel
4F Spa & Sauna
B1-3F Shops &
Restaurants
B3-B2 Night club
& Live house

Roof-top restaurant KIYO GINZA

- Large horizontal sliding sash windows seamlessly connect the indoor and outdoor areas, creating a sense of openness.
- The terrace seating area, approximately 300m², which boasts the same size as the indoor seating area, is furnished with a variety of greenery, creating a resort-like urban oasis in the center of the bustling corridor district.

A space that gently connects indoors and outdoors

Main Dining Space

- ▶ Open space, which is rare in Ginza, enhances the facility's value

Grand Design Proposal as Overall Optimization Including the Adjacent Existing Plant

Welfare Building at Higashi-Ogaki Plant of Pacific Industrial Co., Ltd.

Grand design and construction of a new welfare building for the expansion of an automobile parts manufacturer's plant

| Factory

Exterior view of the welfare building (center) and the new plant (right)

Location: Ogaki-city, Gifu
 Completion: Oct. 2023
 Floors: 2 aboveground
 Structure: S
 Site area: 90,749.96㎡
 Building area: 1,865.44㎡
 Total floor area: 3,242.76㎡
 Photo: SS Co., Ltd

Unified overall design and symbolic design as a central hub

The planned welfare building, new factory, and research building on the new site were designed to have continuity with unified height and a common design motif featuring a horizontal white band to establish a cohesive brand image. While fostering this sense of unity, the welfare building, which will serve as the hub of the entire site, incorporates a horizontal white band and diagonal lines for a symbolic design.

The cafeteria on the 2nd floor of the welfare building was designed as a bright, open, and sophisticated space that provides comfort to the employees using the facility.

- ▶ **Enhancing corporate brand power**
- Improvement of employee satisfaction and recruiting effectiveness**

Disaster prevention base for the entire Higashi Ogaki Plant

The welfare building features spacious areas, including the cafeteria, and is equipped with a doctor's office. It is also planned to serve as an evacuation site for employees in the event of a disaster. The visitor area on the 1st floor is envisioned as a disaster prevention base, while the cafeteria and multipurpose space on the 2nd floor will serve as an evacuation site.

As part of its BCP measures, the building is equipped with a private power generator and can also utilize an external power supply vehicle to ensure power availability.

- ▶ **Ensuring employee safety**

Grand design considering the integrated use of the existing factory site and the new site

During a project to expand the plant and build a new plant on the adjacent site, the client requested a new welfare building to enhance the manufacturing office functions and welfare facilities, including a medical area, a store, and a cafeteria. As a result, a plan was developed to build a new welfare building.

To enhance employee convenience, the welfare building was centrally located on the site for easy access from each plant, optimizing lunch and break times and strengthening its role as the hub of the manufacturing office.

- ▶ **Enhancing employee convenience and site functionality**

*Basic design of the research building, and design and supervision of the welfare building Site image

PJ2022

Dai-Dan Hokuriku Branch

Reconstruction project as a resilient response to aging buildings in Kanazawa, a city with a traditional townscape

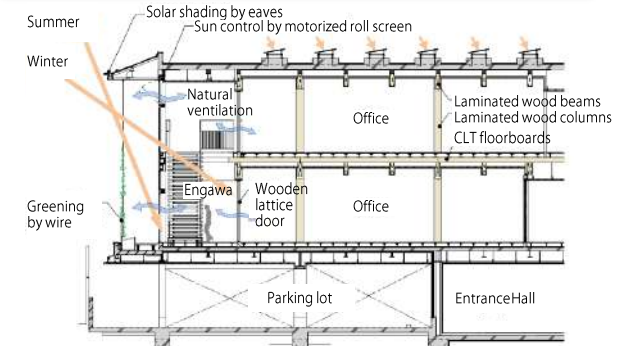

| Office

PJ2022

The 36th Nikkei New Office Award (Chubu New Office Encouragement Award)
 The 42nd Ishikawa Architectural Award (Honorable Mention)
 The 29th Ishikawa Landscape Grand Prize (Ishikawa Landscape Award)
 The 45th Kanazawa Urban Beauty Culture Award
 The 17th Wood Architecture Award (Selection Committee's Special Prize)
 Wood Design Award 2023
 The 22nd Environment and Equipment Design Award, Honorable Mention
 The 35th Ishikawa Advertising Landscape Award (Ishikawa Outdoor Advertisers Association Award)

Efforts to Contribute to a Sustainable Society

North-south cross section, scale 1:200

Introducing technologies that contribute to decarbonization, better working environment, and resilience. The building achieved ZEB Ready through the use of CLT and laminated wood for part of the structure to reduce CO₂ emissions during construction as well as effective energy management and has also acquired the CASBEE SWO (Smart Wellness Office) S rank, contributing to a sustainable society.

► **ZEB Ready & CASBEE SWO
 acquisition achieved**

Consideration for traditional townscape

Facing Hyakumangoku Street and close to the Preservation District for Groups of Traditional Buildings, the exterior was planned to inherit the local character.

- The height of the building was kept low.
- Low brightness and saturation of exterior materials
- Finishing materials with texture were used.

When night falls, the lighting is controlled in phases to create an atmosphere of the traditional soft light of "andon".

► **Exterior design compatible with Kanazawa's urban landscape**

Construction of contemporary Engawa, a veranda space

The Engawa is reinterpreted as a space that performs modern functions, such as using natural energy and natural ventilation to address global warming and climate change, and to reduce environmental impact. A vaulted porch around the perimeter of the office reduces the heat load in the rooms and contributes to more active staff communication as a comfortable space with natural ventilation. The workspace is designed to accommodate "activity-based working".

► **Creating a comfortable working environment in harmony with nature**

PJ2022

First ZEB certification for a research building of a national university

National University Corporation Osaka University, Pharmacy Building No.4

Project funded by donations to commemorate the 90th anniversary of Osaka University and the 100th anniversary of Osaka University of Foreign Studies.

| Education

PJ2022

Inducing cross-innovation

The concept is a future-oriented space where knowledge and encounters merge and create new innovations. The laboratories on the 3rd and 4th floors are designed with the flexibility to accommodate everything from open laboratories to special laboratories.

- ▶ **Enhancing intellectual productivity by stimulating interaction**
- ▶ **Creation of a highly flexible and functional space**

Exterior design in harmony with the external environment

The east facade of the building is clad with a curtain wall to add transparency to the exterior design along with a clear impression of the building configuration. The west side with a mechanical balcony is covered with perforated folded panels to block the western sun while concealing the view from the residential area. Part of the west facade is a transparent atrium space designed to embrace a preserved camphor tree.

- ▶ **Clear building composition with glass facade**
- ▶ **Consideration for the neighborhood and surrounding area**

Promotion of environmental friendliness and energy conservation

Low-E double-glazing glass was used to reduce the impact from the exterior skin. Energy consumption was reduced by 51% according to the BELS by actively adopting energy-saving methods, such as selecting high-efficiency air conditioners, LED lighting, and lighting controls. In October 2021, the building was certified as ZEB Ready, which means that the annual primary energy balance consumed by the building is close to zero.

- ▶ **ZEB Ready certification was achieved**

YASKAWA Technology Center (YTC)

New construction project for a technology development center for new technology and innovation adjacent to the headquarters | R&D

The 35th Nikkei New Office Award (New Office Promotion Award)
(Kyushu-Okinawa New Office Promotion Award, Kyushu Bureau of Economy, Trade and Industry Director-General's Award)
The 9th Kitakyushu City Urban Landscape Award, Architectural Design Award (Yaskawa Electric Robot Village)
The 55th Japan Sign Design Award

Location: Kitakyushu city, Fukuoka
Completion: January 2021
Floors: 4 above ground
Structure: Steel
Site area: 107,411 m²
Building area: 12,734 m²
Total floor area: 25,458 m²
Photo: SS Co., Ltd

South exterior (braced columns and truss beams)

Mega floor using megastructure

The project was planned on a site with construction restrictions, but the building was overhung to make effective use of the airspace above the restricted area, and the development and research functions were concentrated on a single-floor mega-plate.

Basic plan in accordance with the given

Office space is divided into upper and lower sections, making it difficult to collaborate.

Plantec's proposed plan

Development department on one floor over the buried pipe.

Knowledge concourse to encourage accidental encounters

Connecting workplaces and experimental areas across multiple floors for rapid linkage with production functions and activation of information sharing

Knowledge Concourse

Workplace for rapid management decision-making and new technological development

Workplace Cafe area

Workplace Control Center

Contributing to the creation of a new town through a town-conscious design
